

TractusIQ™

Domain Expertise + Workflow Automation

Expert-led contract intelligence for Roads, Expressways, Railways, Metros & MRT projects, supporting EPC, HAM, BOT, TOT and Item Rate contract models.

From scattered correspondence to structured contractual intelligence.

CORE CAPABILITIES

Correspondence
Intelligence

Contractual Issue
Management

Clause, Reference &
Chronology Linking

Preparation of
First-Cut Drafts

Live today and what comes next

Project Setup

Correspondence Intelligence

Actions / Responses

Smart Draft

TractusIQ™ operates strongest across the three central stages : turning correspondence into structured, clause-linked intelligence & first-cut drafts in minutes, with user refinement.

✓ Available

Roads & Expressways

EPC · Item Rate / BoQ · HAM · BOT (Toll) · BOT (Annuity) · TOT

Railways, Metros & MRT

EPC · Item Rate / BoQ

From scattered records to structured project correspondence

TractusIQ™

REAL SITE SITUATION

(a) A highway project on an average runs 3 to 4 years and accumulates thousands of letters, emails, MoMs, instructions, MPRs, notices and approval records. Different team members keep different folders and spreadsheets, so locating a complete record takes real time when an issue arises.

(b) Most of the major firms use an internal DMS, yet the control often lives with one document controller.

MANUAL CHALLENGE

(a) Scattered folders. Disconnected emails. Duplicate records and different naming. Missing references. Dependency on individuals.

(b) When that controller is unavailable, replaced or mid-handover, a record vacuum can emerge until continuity is rebuilt.

INGEST · STRUCTURE · CLASSIFY · LINK

**Captures all correspondence****Extracts project information****Identifies duplicates****Links references across letters****Structured, searchable, issue-organised**

BUSINESS OUTCOME

The contracts team works from one structured record instead of many folders.

When a routine notice becomes critical evidence

TractusIQ™

REAL SITE SITUATION

(a) The Authority Engineer issues a notice on “Slow Progress of Works.” The Contractor replies citing delayed ROW, utility shifting, pending approvals, local obstruction, unseasonal rainfall and change of scope. At the time it reads as routine correspondence.

(b) A well-run DMS files that letter correctly, but filing alone does not link them to the right issue and category.

MANUAL CHALLENGE

(a) Months later, during EOT or a dispute, that notice is buried among hundreds of inward letters. The team must rebuild by hand what action was required, who owned it, whether the reply met the notice period, and which later letters referred to it.

(b) If the person who handled it has moved on, it may leave behind a content-driven vacuum.

BUILDS THE EVIDENCE CHAIN

Issue identified

Clause linked

Action tracked

Related correspondence

Evidence chain preserved

BUSINESS OUTCOME

A routine project letter stays contractually visible instead of becoming a forgotten record.

Clause, chronology and historical context

TractusIQ™

REAL SITE SITUATION

(a) A major letter lands on EOT, Change of Scope, Change in Law, delay, payment, milestones or Force Majeure. A sound reply needs the relevant Contract Agreement clauses, prior correspondence, earlier commitments, chronology and the entitlement position.

(b) The DMS may hold all the documents, but issue-wise categorisation and contextual linking remain largely manual.

MANUAL CHALLENGE

(a) A professional with 3 to 5 years of experience on contractual and/or on the given project may not hold the full evidence/history. Manual preparation risks missed references, wrong chronology, missed clauses, inconsistent positions and simple human error.

(b) A new joiner or mid-experience engineer may carry only a limited understanding of the project history.

RECONSTRUCTS THE FULL CONTEXT

Contract Agreement clause

Previous contractor position

Referenced & earlier letters

Chronology & project events

Structured first-cut draft

BUSINESS OUTCOME

The team responds with complete context, not just the latest letter. Professional review still applies.

EOT, COS and contractual issues managed with clarity

TractusIQ™: your techno-contractual clerk, done in clicks.

TractusIQ™

REAL SITE SITUATION

(a) An EOT or claim assessment can arise a year or more into execution, on top of initial delay notices, hindrance letters, rainfall records, ROW and utility correspondence, EOT submissions, AE recommendations and Authority decisions already spread across the project.

(b) A DMS stores these records but grouping them by issue and category is still largely manual.

MANUAL CHALLENGE

(a) The traditional exercise: search folders, identify EOT letters, read every one, find referenced letters, spot missing ones, prepare chronology and write the issue summary. It is slow and easy to miss correspondence.

(b) When the document controller moves out, partly built claim folders can be duplicated, fragmented or lost.

ANALYSE · BUILD · JUSTIFY · SUPPORT

Clause-based analysis

Chronology & evidence linking

Select & download issue & category set

Draft preparation (first-cut)

User review & refinement

BUSINESS OUTCOME

A multi-year EOT record becomes a structured, review-ready contractual history.

Turn insights into action faster

TractusIQ™

REAL SITE SITUATION

(a) A Contractor or Concessionaire must issue an important reply within the contractual notice period on EOT, Change of Scope, Change in Law, land availability, encumbrances, delay events or Force Majeure, with the right clauses, references and project facts ready for management review.

(b) Contractual timelines continue to run regardless of who is available to respond.

MANUAL CHALLENGE

(a) Traditionally a senior professional reviews the incoming letter, searches prior correspondence, identifies clauses, works out chronology and context, structures the response and verifies references. This can take several hours or much of a working day.

(b) An engineer at this point, or in transition, is vulnerable on the contractual timelines and carries that risk.

IDENTIFY · LINK · GENERATE · REFINE

**Identify the issue****Link clauses & references****Generate first-cut draft****Review & refine with inputs**

BUSINESS OUTCOME

Even a junior team member can begin from a structured first-cut draft response. Final validation stays with the approver.

TractusIQ™ INTELLIGENCE

1

Capture

Ingest & structure letters; reference check & chronology

2

Classify & map

Issue identification, categorise; clause, history & context link

3

Draft & review

First-cut drafts & templates, reviewed by the user

4

Track

Action, ownership & due-date tracking

OUTPUTS

Structured issue register

Linked reference & chronology

Downloadable Issue &
Category wise correspondence

First-cut drafts & templates

TractusIQ™ prepares the brief. The user validates the response.

What it does, and what that is worth

TractusIQ™: your techno-contractual clerk, done in clicks.

KEY CAPABILITIES

Correspondence Intelligence

Reference Linking

Contract Clause Linking

Milestone Visibility

Structured Issue Summaries

Previously Generated Responses

Role-Based Visibility Control

Issue & Categorisation

Chronology / Historical Chain

Action & Due-Date Tracking

Advanced Search / Retrieval

First-Cut Drafts preparation

Audit Trail (who did what)

Traceable Contractual Records

INDICATIVE Manual effort vs TractusIQ™assisted

EOT Letter: 1-2 days → in minutes Major reply: hours → first-cut in minutes
(indicative)

BUSINESS VALUE

Why teams choose TractusIQ™

Reduced manual effort

Less searching, sorting and re-keying

Faster access to information

Contractual facts found in seconds

Better traceability

Every output tied back to its source

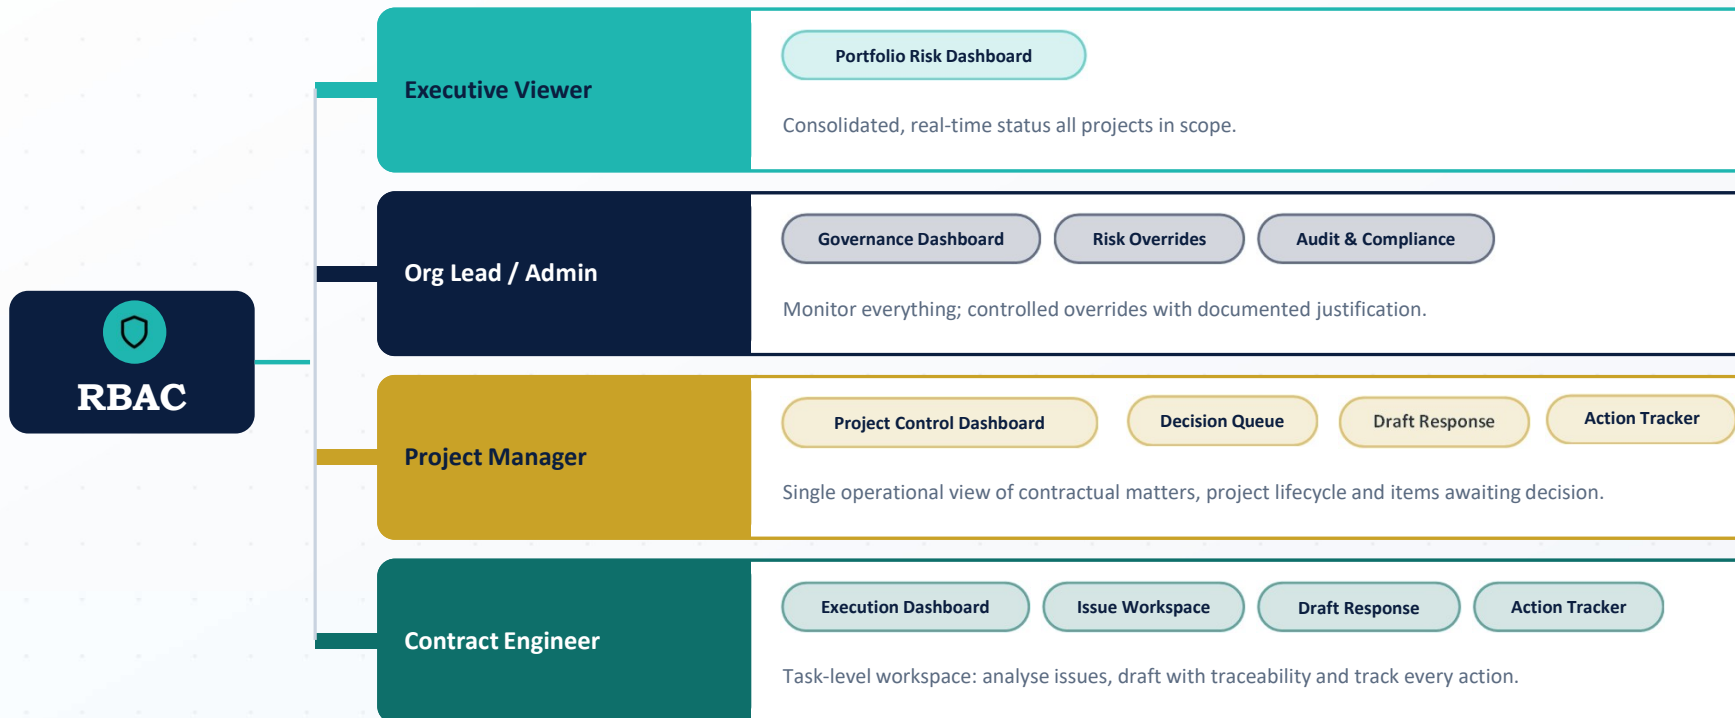

Improved consistency

Uniform, defensible correspondence

The right view for every role

TractusIQ™: your techno-contractual clerk, done in clicks.

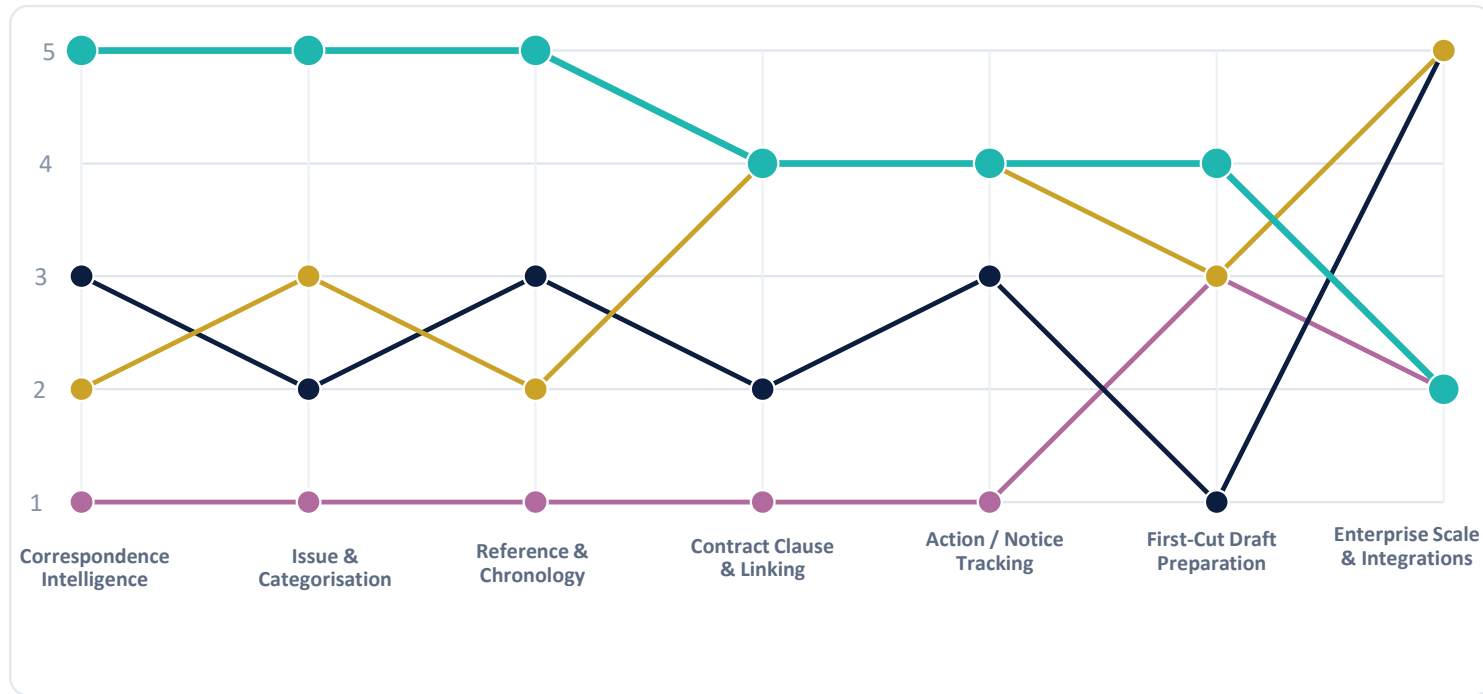

One RBAC model routes each user to the dashboards and controls they are authorised for, from portfolio-level risk down to drafting at the desk.

Same data, different lenses. Every override, approval and action is captured in the Audit Trail for full traceability.

Where TractusIQ™ creates differentiated value

These are the criteria the infrastructure industry needs to keep a project moving and delivered on time: finding the record, linking it to the clause, rebuilding the timeline and drafting the reply before the notice period runs out. Scored 1 (low) to 5 (high).

THE FOUR CATEGORIES

- TractusIQ™**
Defends the outcome. Clause-linked actions and dispute-ready drafts, fully traceable.
- ERP/PMIS**
Runs the project. Document control and audit trail at massive scale.
- CLM**
Governs the contract. Enterprise authoring, obligations, negotiation.
- Generic AI (ChatGPT, Claude)**
Drafts the words. Fluent text, but no contract memory or record.

GENERIC AI

ChatGPT · Claude · Copilot

Answers questions about a document you hand it.
No project memory, no clause links, no lasting record.

VS

TractusIQ™

Dedicated project workflow

Your whole project record, clauses and dashboards **one click away**, so context is ready before the reply is due.

Flexible engagement models

1 TractusIQ™ Standalone

The client uses the TractusIQ™ platform independently.

- ✓ Platform access & project setup
- ✓ Issue & categorize management
- ✓ Action tracking
- ✓ Correspondence intelligence
- ✓ Advanced search & retrieval
- ✓ First-cut draft preparation

2 TractusIQ™ + i2R Hybrid

- Client Inputs
- TractusIQ™ Intelligence
- i2R User Review / Validation
- First-Cut Draft preparation with User refinement
- Client Validation / Submission

PRICING · HYBRID ENGAGEMENT Per project · incl. 18% GST

STREAM 1 · MONTHLY

₹50,000 /mo

Platform · rolling monthly · 250 docs · 50 drafts
Flexible entry, start any time, no lock-in

★ BEST VALUE

STREAM 1 · ANNUAL

₹30,000 /mo

Save 40% · 5,000 docs · 500 drafts
Platform · lowest monthly rate · full projects

+ HYBRID SERVICE

STREAM 2 · i2R RETAINER

₹80,000 – ₹1,10,000 /mo

Professional services · decided per project scope
Billed monthly, independent of the platform fee

The two streams are billed and settled independently. Half-Yearly / Quarterly plans also available. Free Pilot Pass (10 documents, 5 drafts, 1 user), activated by the TractusIQ™ Team after a demo.
